## Solid State Temperature Switch TS2000

- ✦ Dual Switch with Built-In Transducer Output
- ✦ High Accuracy with Fully Adjustable Deadband
- ✦ Built-In Digital Temperature Readout
- ✦ Fully Configurable via Keypad

**B**arksdale's UTS7 Series of Solid State Temperature Switches offers the convenience of three discrete components (dual temperature switch, temperature transducer, and digital temperature gauge) combined into one compact package. Setpoints and deadband are easily adjusted by using a built-in, user-friendly menu, eliminating the need for a test bench. Analog transducer outputs are scalable from 25% to 125% of the full adjustable range. A 12-bit microprocessor provides built-in self diagnostics and allows for switch time delays and cycling up to 100 times per second. For applications requiring precise temperature monitoring and extremely long life, the **UTS7 Series** is the ideal solution.
